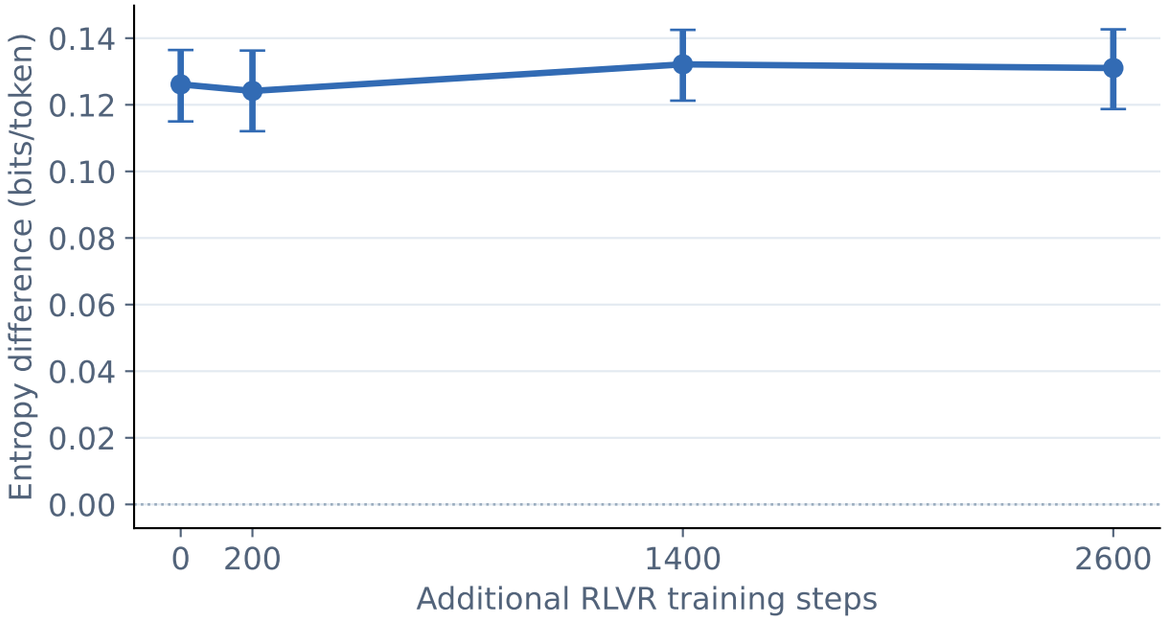
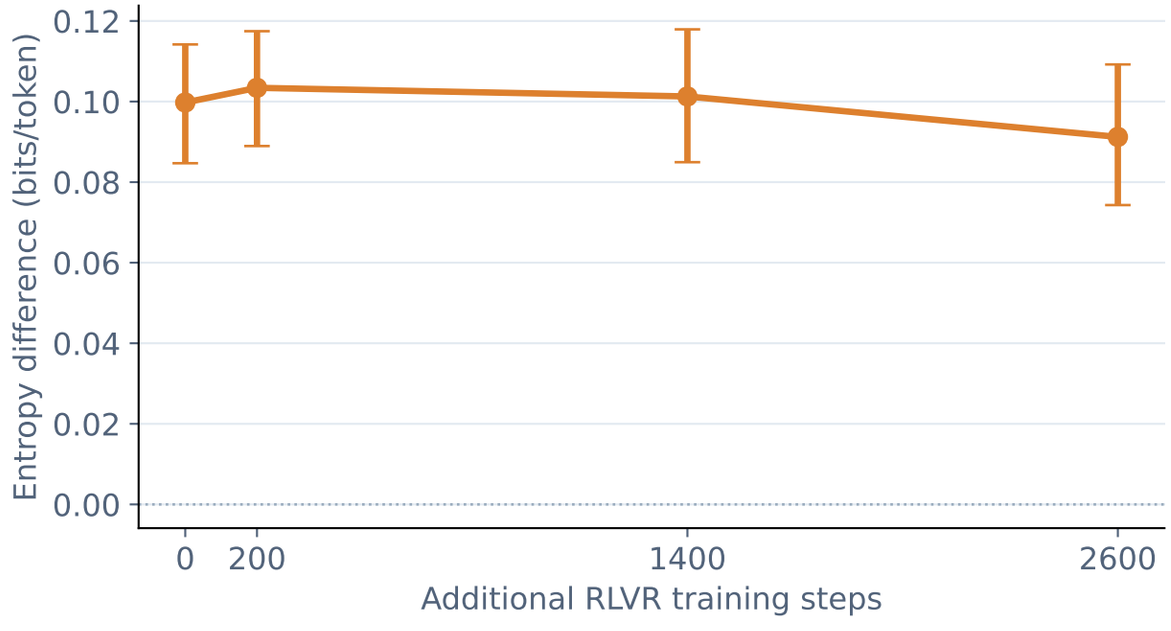
# Do JSD and entropy differences tell the same story?

OLMo 2 1B • Same 48 questions × 5 trials × 4 checkpoints • Fixed A, saved B responses

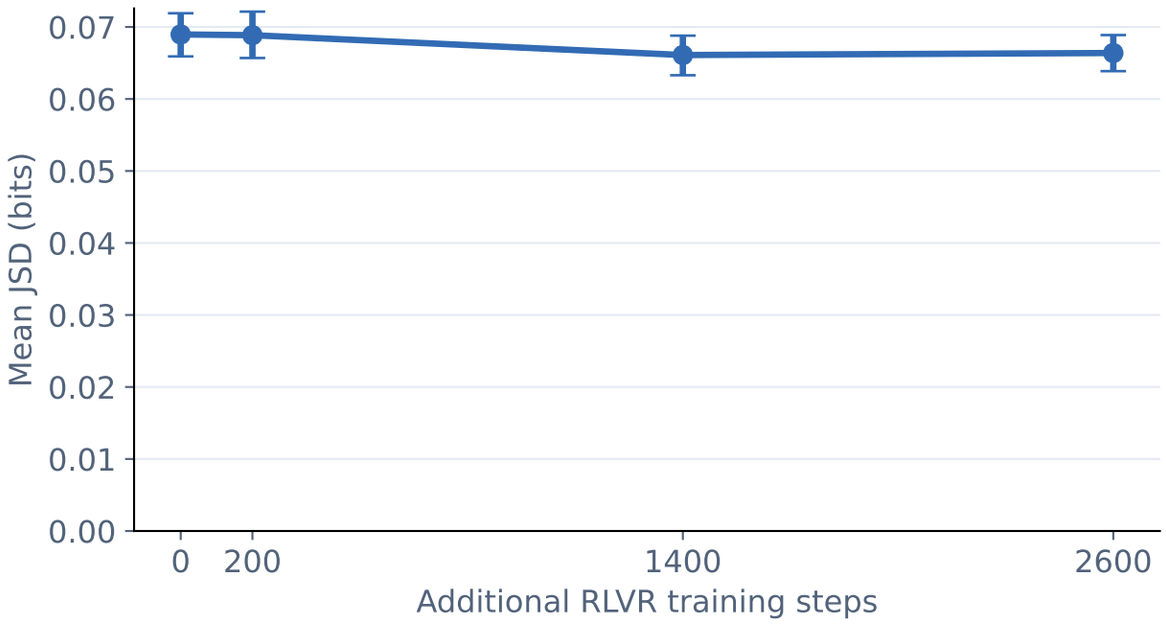
### Original entropy proxy: Correction → B



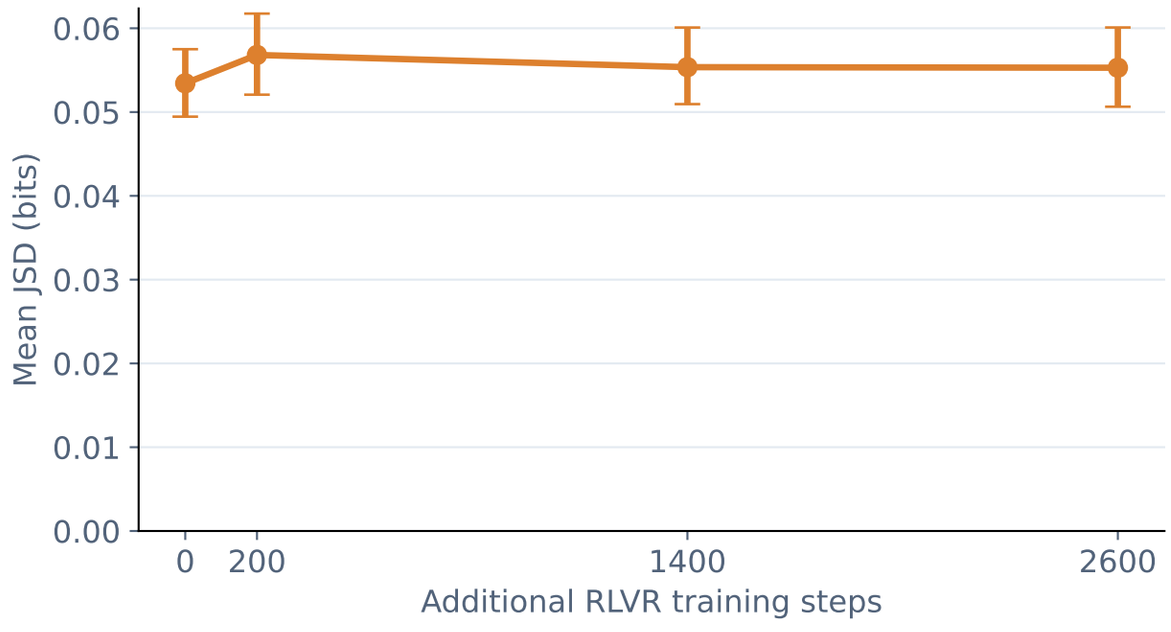
### Original entropy proxy: A → B



### JSD: Correction → B



### JSD: A → B



Means over the first 100 available B tokens. Bars: 95% question-bootstrap intervals; separate y-axis scales.

JSD measures distribution change. These are sensitivity proxies, not validated plasticity or empowerment values.
